

11400 South Construction Impacts How Will Construction Impact Me?

Fall 2009- Fall 2010

Overview

As construction progresses on 11400 South, you may experience some changes or impacts to your daily routine. A&W Highway Contractors is working to mitigate construction related impacts. However as construction progresses, you may experience the following:

Garbage & Recycling Pick-Up

In coordination with the cities and garbage collection companies, garbage and recycling along the corridor will continue on your regularly scheduled collection days beginning at 6:45 a.m. Please have cans accessible. If construction is taking place where you normally put your cans, place your cans next to the barricades and A&W will ensure that your cans get to the collection location. If your garbage or recycling is not collected, please call 801-696-4865.

Mail Delivery

A&W is working with the U.S. Postal Service to ensure mail is delivered throughout construction. In order to maintain mail service, mailboxes will be made mobile. The location of your mailbox may change frequently to coordinate with construction activity. A&W will work with property owners to ensure the mailbox location is known and accessible. If you have any problems with mail delivery, please call a project representative, 801-696-4865.

Vibrations

You may feel vibrations from construction equipment and activity. Vibration levels are measured regularly along the corridor to ensure that they stay within safe and permitted levels. The majority of vibrations will be minor and comparable to regular roadway traffic.

Noise

Construction can be noisy. Expect noise from back-up alarms on construction equipment, concrete paving, saw cutting and other construction activities. We monitor noise to ensure levels are kept within reason. Noise level monitoring will continue through the duration of the project.

Dust

Unfortunately dust is a reality of roadway construction. A&W is working to keep dust at a minimum. Daily dust control on 11400 South includes the continual use of water trucks through the project corridor, sweeping the roadway nightly and the installation of water cannons at the 3600 West site.

Monitoring is done on a daily basis and dust control is adjusted accordingly to ensure dust stays within acceptable opacity standards. As dust increases on the project due to wind or weather, additional measures are taken to mitigate any construction-related causes.

Dust control mitigation:

- *Level 1* Minimal dust: water as necessary to maintain adequate soil moisture.
- *Level 2:* Minimize drop heights and spillage and continue to apply water.
- *Level 3:* Load materials on down wind side, minimize handling and stockpile disturbance, reduce vehicle speed and increase frequency of water application.
- *Level 4:* Cease operations until conditions improve and continue to apply water.

Utility Interruptions

A&W will notify all residents and businesses of any planned utility interruptions required during construction. However, when working around utilities there are uncertainties that may cause unplanned utility interruptions. A&W will do its best to keep these impacts to a minimum and apologizes for any inconvenience you may experience due to unanticipated utility interruptions.

If you experience a utility interruption, your utility provider will be your best source of information about the outage and timeline for restoration of service.

Cable: Comcast - 1-800-266-2278

Gas: Questar - 801-324-5111; Emergencies Only: 1-800-767-1689
